Open Letter: Former Heads of State and Nobel Laureates Call on President Biden To Waive Intellectual Property Rules for COVID Vaccines

People's Vaccine Alliance 10 hours ago 10 min read

Dear President Biden,

We the undersigned former Heads of State and Government and Nobel Laureates are greatly concerned by the very slow progress in scaling up global COVID-19 vaccine access and inoculation in low- and middle-income countries.

The world saw unprecedented development of safe and effective vaccines, in major part thanks to U.S. public investment. We all welcome that vaccination rollout in the U.S. and many wealthier countries is bringing hope to their citizens.

Yet for the majority of the world that same hope is yet to be seen. New waves of suffering are now rising across the globe. Our global economy cannot rebuild if it remains vulnerable to this virus.

But we are encouraged by news that your Administration is considering a temporary waiver of World Trade Organization (WTO) intellectual property rules during the COVID pandemic, as proposed by India and South Africa and, supported by more than 100 WTO member states and numerous health experts worldwide.

A WTO waiver is a vital and necessary step in bringing an end to the pandemic. It must be combined with ensuring vaccine know-how and technology is shared openly. This can be achieved through the World Health Organization COVID-19 Technology Access Pool, or your Chief Medical Advisor, Dr. Anthony Fauci, has called for. This will save lives and advance us towards global herd immunity.

These actions would expand global manufacturing capacity, unlimited by industry monopolies that are driving the slow supply shortages blocking vaccine access. A 50 people in most poor countries may well go without a vaccine this year, while Moderna is projecting it will be able to make at least 2024 to achieve mass COVID-19 immunization, despite what the limited, while welcome, COVAX initiative is able to offer.

These moves should be accompanied by coordinated global investment in vaccine manufacturing capacity, so that countries can rapidly manufacture and prepare so for future ones, as part of a more robust international health architecture. If this last year has taught us anything, it is that threats to public health are global, and that strategic permanent investment, action, global cooperation, and solidarity are vital. The market cannot adequately meet these challenges, and health crises can cost us catastrophe.

The full promotion of intellectual property and monopolies will only negatively impact efforts to vaccinate the world, and will be of benefit to the U.S. Given artificial global supply shortages, the U.S. economy already risks losing $21 billion this year. Were the virus to run rife in the world, and even if vaccinated, people in the U.S. would continue to be exposed to new viral variants.

Mr. President, one world learned painful lessons from unequal access to lifesaving treatments for diseases such as HIV. In response, 7 million workers, the U.S. will provide an example of responsible leadership at a time when the world needs it most. We ask you to do the right thing and, by waiving a national law, lead a global effort to refocus efforts and of countries to follow your lead will save lives.

With your leadership, we can ensure COVID-19 vaccine technology is shared with the world. Supporting the emergency waiver of COVID-19 related intellectual property rules will give people around the globe a fighter a make up to a vaccine from the virus. We need a people's vaccine.

Many of us know, first hand, the reality of political office and the pressures, challenges and constraints of leadership. However, we believe this would be a decisive moment for your Administration. In the spirit of international and renowned leadership, one we hope will inspire many more to do the same.

Please take the urgent action that only you can, and let this moment be remembered as the time when the world's most powerful nation gave its safety for all ahead of the commercial monopolies of the few.

Let us now ensure an end to this pandemic for us all. In advances for global and equitable vaccine access, we remain ready to support and add our voices to your efforts on this front.

Signed,

Peter Agre — Nobel Prize Laureate in Chemistry (2003)

Edie Abu — Prime Minister of Palauan (1991-1993) *

Harvey J. Alter — Nobel Prize Laureate in Medicine (2020)

Hiroshi Amano — Nobel Prize Laureate in Physics (2014)

Werner Arber — Nobel Prize Laureate in Medicine (1978)

Shoukat Aziz — Prime Minister of Pakistan (2004-2007) *
